GUIDE TO THE USE OF THIS JOURNAL

The Australian Official Journal of Patents (AOJP) reports all major events and actions which take place during the life cycle of an Australian patent and provides certain details of these actions as they relate to the patent or patent application involved. This guide sets out to teach the reader how to use the journal to access this information.

While there are many possible actions in the life of a patent, the majority of actions reported relate to the following events, which are the main stages in the progression of a patent application to a sealed patent:

(i) FILING -

This is the act of making an application. When the application is first filed certain details are published.

(ii) OPEN-TO-PUBLIC-INSPECTION (OPI) -

Approximately 18 months after first filing of an Australian or a corresponding foreign application, certain application documents, including the complete specification, become available to the public (Open-to-Public-Inspection or "OPI"). Relevant application details are published.

(iii) NATIONAL PHASE ENTRY (NPE) -

For an application filed under the PCT to have full effect, it must move from the international phase of processing into the National phase of processing, by complying with the requirements of s.89(3). For PCT applications that were filed after 1 January 2004 which have entered the National Phase certain details are published.

(iv) ACCEPTANCE -

This is the Commissioner's acceptance of a patent application. Once the Commissioner has accepted a patent application, certain details of the application are published in the AOJP. Notice of opposition may be filed within three months of advertisement of acceptance.

(v) OPPOSITION -

If an opposition action is commenced against the grant of the patent, the six-figure acceptance number and the name of the opponent are published. If the opposition is to the Certification of an Innovation Patent, the patent number and the name of the opponent are published.

(vi) SEALING -

Most accepted applications are not opposed. These proceed to sealing and become granted patents. Of the few that are opposed (less than 1%) most of these, after resolution of the opposition, proceed to sealing and become granted patents. Sealed patents are simply listed in order of their application number.

(vii) CERTIFICATION-

This is the Commissioner's Certification after passing examination of a previously granted unexamined Innovation Patent.

In addition to the actions related to these stages, other actions reported include: assignments, lapsing or withdrawal of applications and ceasing or expiry of patents, voluntary amendments, extensions of time for certain actions and registration of licences.

How To Identify Information Using "INID" Numbers

Patents are published in many different countries and in many different languages. As a result, finding the information that you want (eg the filing date) on a patent document or in a journal can be quite difficult. There is an international system operating, however, which codifies this information in an unambiguous way, by assigning a specific number to each piece of information about the history of a patent. These numbers are called the **Internationally Agreed Numbers for the Identification of Data** or INID numbers.

These numbers appear on all published patents and abstracts and are used throughout this journal to identify particular items of information. For example, the date on which a document is filed has the INID number (22), while the name of the applicant has the INID number of (71). These numbers are always expressed in parentheses and always immediately precede the information to which they relate. For example:

(22) 12.10.91

means that the filing date of the document which contains this reference is 12 October 1991. Learning the INID numbers for the information you want will help you find it quickly and easily.

A complete list of the INID numbers and the items to which they relate is provided at the end of this Guide.

How Australian Patent Documents are Numbered

Patent applications in Australia are assigned a number at the filing stage in their processing. Each Australian application will retain the same number throughout its life, though different numbers may be associated to the application. The number will incorporate the year of lodgment then a unique number within the appropriate range.

There will be number ranges for types of patents:

100,000 – 199,999	Innovation
200,000 – 799,999	Standard
800,000 – 899,999	Petty
900,000 – 999,999	Provisional

When searching for information and ordering documents it is vital that you understand the numbering systems.

1. **Provisional Applications** are given a ten-figure number

e.g. 2002901123

A provisional application number is identified by the INID number (21).

2. **Complete and Innovation Applications** are also given a ten-figure application number

e.g. 2002200345 Standard
2002100123 Innovation

There are prefixes applied to this number which indicate whether the application has been accepted:

A document corresponding to an unaccepted application has the prefix, AU-A; eg AU-A-2002200234.
A document corresponding to an accepted application carries the prefix AU-B; eg AU-B-2002200234.

Users need to be aware that an accepted document may differ from the corresponding unaccepted document. This is because amendment may occur between first publication (OPI) and second publication (acceptance).

A ten-figure application number is identified by the INID number (21).

NOTE: When ordering any patent document from us, whether accepted or not, please quote the ten-figure application number preceded by the appropriate prefix.

Arrangement of Information in the Journal

For each of the categories

- (i) Provisional Applications Filed,
- (ii) Complete Applications Filed,
- (iii) Applications Open to Public Inspection
- (iv) Applications Entered National Phase
- (v) Applications Accepted, and
- (vi) Innovation Patent Certified.

The Journal lists the information published in that category in an alphabetical Name Index list based on the name of the applicant. These indices are useful if you wish to find information about applications made by a particular applicant.

In addition to the Name Index there is provided, for each of these categories, a Numerical Index. This index lists the applications either in order of their five-figure Application Numbers, in the case of complete applications filed and applications OPI, or in order of their six-figure Document Number in the case of accepted applications. It provides, for each number, the name of the applicant. These indices are useful if you wish to track the progress of a particular patent application.

There are also IPC Indices provided for applications which are OPI, for applications which have entered national phase and for applications which have been accepted. IPC stands for International Patent Classification. Each IPC "mark" is an alpha-numerical representation of a particular area of technology. These indices are in order of IPC mark, and within each mark provide either the five-figure application numbers of the application which are now OPI or the six-figure numbers of the cases now accepted. These indices are useful if you wish to check on patent activity in a particular technology.

Using the Indices

1. To Find Patent Information if You Know the Name of the Applicant.

Use the Name Indices. They will give you the following information identified by their INID number:

Related by division	(62)		

You will notice at each stage of following application through that all applications are in alphabetical order of **Applicant**, not inventor.

2. To Find Information About a Patent Application if You Know its Number.

Use the appropriate numerical index. This will give you the name of the applicant from the number. You will then need to use the appropriate Name Index as above to find out other information about the Patent Application you are interested in.

The following Numerical Indices are available:

- A) **Provisional** Applications filed.
- B) **Complete** Applications filed.
- C) **Innovation** Applications filed.
- D) Applications **Open to Public Inspection**.
- E) Applications **Entered National Phase**
- F) Applications **Accepted**.
- G) Innovation Patent **Certified**

3. To Find Information About Patent Documents in the Area of Technology in which You are Interested if You Know the International Patent Classification Mark for that Area.

All patent applications are classified according to their subject matter using the International Patent Classification (IPC). Although the system is very detailed and covers all technologies, knowledge of the IPC marks of the technologies you are interested in will allow you to find patent documents in these technologies quite easily. To identify the IPC marks of technologies you are interested in, you can inspect relevant documentation in any of IP Australia's state offices.

The indices to use are

- A) Applications **OPI** - IPC Index
- B) Applications **accepted** - IPC Index
- C) Applications **Entered National Phase** – IPC Index

These indices give you the numbers of the applications which are either OPI, Entered National Phase or Accepted and are listed in order of their IPC marks.

Once you have the numbers of the documents that interest you, consult the relevant Number Index (see 2. above) to find the applicant's name, and then the Name Index (see 1. above) to find out the details of that application.

'INID' NUMBERS in use on Australian Patent Documents

'INID' is an acronym for 'Internationally agreed Numbers for the Identification of Data'.

(10) Document identification

- (11) Number of the document
- (12) Plain language designation of the kind of document
- (19) WIPO country code, or other identification, of the country publishing the document.

(20) Document filing data

- (21) Number(s) assigned to the application(s).
- (22) Date(s) of filing application(s)
- (23) Other date(s) of filing, including exhibition filing date and date of filing complete specification following provisional specification.
- (24) Date from which industrial property rights may have effect.

(30) Priority data

- (31) Number(s) assigned to priority application(s)
- (32) Date(s) of filing priority application(s)
- (33) Country (countries) in which the priority application(s) was (were) filed.

(40) Date(s) of making available to the public

- (43) Date of publication by printing or similar process of an unexamined document, on which no grant has taken place on or before the said date.
- (44) Date of publication by printing or similar process of an examined document, on which no grant has taken place on or before the said date.
- (45) Date of publication by printing or similar process of a document, on which grant or certification has taken place on or before the said date.

(50) Technical Information

- (51) International Patent Classification
- (52) Domestic or national classification
- (54) Title of invention
- (56) List of prior art documents, if separate from descriptive text
- (57) Abstract or claim

(60) Reference(s) to other legally related domestic document(s)

- (60) Related by cognate(s).
- (61) Related by addition(s).
- (62) Related by division(s).

(70) Identification of parties concerned with the document

- (71) Name(s) of applicant(s)
- (72) Name(s) of inventor(s) if known to be such
- (74) Name(s) of attorney(s) or agent(s)
- (75) Name(s) of inventor(s) who is (are) also applicant(s)

(80) Identification of data related to International Conventions other than the Paris Convention

- (86) PCT Application Number
- (87) PCT Publication Number

NOTE

- (1) Australian patent documents published on or after 26 October 1978 should be referred to by the application number preceded by the prefix AU-A or AU-B.

 AU-A = Pre-examination **AU-B** = Post-examination
- (2) The classification used is the International Patent Classification and is identified by the INID code (51). Further editions of the classification are identified as (51)², (51)³, (51)⁴ and (51)⁵.
- (3) INID code 74 provides for the name of the patent attorney, or firm of attorneys, prosecuting an application.

Official Notice

Changes in PCT Fees

In accordance with the directives adopted by the PCT Assembly at its thirty-second session (September 22 to October 1, 2003), new equivalent amounts in AUD will be established with effect from 15 September 2008, As follows:

International PCT Fees

1. Transmittal Fee	\$150	
2. International Search Fee	\$1600	
3. International Filing Fee	\$1353	
If the application contains 30 Pages or less including the Request form		
PCT-EASY component of PCT-SAFE reduction	\$102	
For filings filed in PDF format		\$204
For filings filed in XML format	\$305	
PLUS		
For Each page in the application in excess of 30 Sheets	\$15	
4. Cost of Preparing Certified Copy of Basic Document	\$100	Per document
5. Copies of Specifications cited in the International Search Report	\$50	per copy
6. Gene Sequence Listing Fee	\$6000	
In Machine Readable form, as part of Specification (equal to 400 times “fee per sheet”)		
In Paper form, with machine readable form as “Search Tool only”		

International Preliminary Examination Fees

1. International Preliminary Examination Fee		
If the International Search was performed by IP Australia	\$550	
If the International search was not conducted by IP Australia	\$780	
2. International Preliminary Handling Fee	\$196	
Total If Search performed by IP Australia	\$746	Total if Search not performed by IP Australia
		\$976

International Type Search Fee

Fee for IP Australia to perform an Article 15(5) International-type Search	\$1400

ABSTRACTS OF DECISIONS

DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS

Application : No. **2004253188** in the name of **LAMBRINI DRANGANOUDIS**

Title : **Template System**

Action : Opposition under section 59 of the Patents Act by **LIFESOURCE GROUP PTY LTD**

Decision : Issued 15 September 2008.

Abstract

The opposition was successful on the grounds of novelty and inventive step with respect to all claims of the application. This was the case irrespective of how the claims are interpreted or might be amended. The application was as a consequence refused.

ABSTRACTS OF DECISIONS**DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS**

Application	:	No. 2004200614 in the name of AVERY DENNISON MATERIALS PTY LTD and COLLOTYPE SERVICES PTY LTD
Title	:	Label for Wet Applications
Action	:	Opposition by LABELMAKERS WINE DIVISION PTY LTD under section 59 of the Patents Act 1990
Decision	:	Issued 16 September 2008.

Abstract

On the evidence provided, claims 1–7, 9, 15, 16, 18–20 lack an inventive step in light of the common general knowledge in Australia.

Based on an undertaking by the applicant that they would make certain amendments to the claims, the opposition does not succeed on the grounds that that the claimed invention was not a manner of manufacture, lacked novelty and did not satisfy section 40(2) or (3) of the Act. In addition, the evidence filed does not show a lack of inventiveness for claims 8, 10–14 and 17.

The specification clearly contains patentable subject matter in light of the evidence. The applicant was given 60 days from the date of the decision in which to propose suitable amendments to overcome the adverse findings.

Costs awarded against the applicant.

ABSTRACTS OF DECISIONS

DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS

Application	:	No. 777324 in the name of G. J. Consultants Pty Ltd
Title	:	“Isoflavone Metabolites”
Action	:	Opposition to the grant of a patent under section 59 and a request for a determination of the Commissioner under section 32 by Novogen Research Pty Ltd
Decision	:	Issued 16 September 2008.

Abstract

The invention relates to isoflavonoid compounds containing vicinal diol moieties and their use in the treatment of various diseases. The present dispute has its origin in a consultancy arrangement between Novogen and the inventor Dr Joannou that commenced in 1995 and was terminated in December 1998 by execution of a Termination and Option agreement. The opponent claimed that the invention was conceived during the consultancy agreement and as a consequence they were the sole person eligible for the grant of the patent. In response the applicant submitted that the invention was made after the termination of the agreements. On that basis they claimed the opponent had no entitlement to the invention. The parties did not dispute that Dr Joannou was the sole inventor.

The evidence establishes that the key compound 5-OH-O-Dma (compound A) which comprises vicinal diol groups was conceived during the period of the consultancy arrangement. Two further isoflavone compounds having vicinal diol groups were also conceived prior to the execution of the Termination and Option agreement. Furthermore the compounds were conceived in the context of a project, and inform of a broader class of compounds having vicinal diol groups in the benzo ring of isoflavone (and their analogues and derivatives). I therefore consider that Novogen is entitled to this matter.

However, Novogen is not entitled to the invention in respect to compounds having vicinal diol groups on the 3-phenyl ring (and their analogues and derivatives). Accordingly the application has been directed to proceed jointly in the names of Novogen Research Pty Ltd and G. J. Consultants Pty Ltd. This direction will take effect once the time for seeking review before the AAT has expired and no application for review of the decision has been made.

As the opponent has been successful in its opposition, costs are awarded against the applicant, G.J. Consultants Pty Ltd.

ABSTRACTS OF DECISIONS**DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS**

Application	:	No. 765849 in the name of TARGET TECHNOLOGY CO., LLC.
Title	:	Metal alloys for the reflective or the semi-reflective layer of an optical storage medium.
Action	:	Opposition under Section 59 of the Patents Act by WILLIAMS ADVANCED MATERIALS, INC.
Decision	:	Issued 17 September 2008.

Abstract

The application related to reflective or semi-reflective layers used in optical storage media ("OSM") for reflecting laser light from the information sections of OSM for reading data. The particular examples of OSM to which the invention was applicable were compact discs ("CDs") and digital versatile discs ("DVDs") of read-only, recordable and re-writable type. The reflective layers were generally made of silver-based alloys. The invention pertained to OSM with reflective layers having particular alloys.

The opposition succeeded on the ground of lack of novelty. Claims 43, 44, 45, 54, 56 and 81 of the application were found not novel in the light of a Japanese patent specification.

The applicant was allowed sixty (60) days from the date of this decision to propose suitable amendments to overcome the above findings.
