## GUIDE TO THE USE OF THIS JOURNAL

The Australian Official Journal of Patents (AOJP) reports all major events and actions which take place during the life cycle of an Australian patent and provides certain details of these actions as they relate to the patent or patent application involved. This guide sets out to teach the reader how to use the journal to access this information.

While there are many possible actions in the life of a patent, the majority of actions reported relate to the following events, which are the main stages in the progression of a patent application to a sealed patent:

### (i) FILING -

This is the act of making an application. When the application is first filed certain details are published.

### (ii) OPEN-TO-PUBLIC-INSPECTION (OPI) -

Approximately 18 months after first filing of an Australian or a corresponding foreign application, certain application documents, including the complete specification, become available to the public (Open-to-Public-Inspection or "OPI"). Relevant application details are published.

### (iii) NATIONAL PHASE ENTRY (NPE) -

For an application filed under the PCT to have full effect, it must move from the international phase of processing into the National phase of processing, by complying with the requirements of s.89(3). For PCT applications that were filed after 1 January 2004 which have entered the National Phase certain details are published.

### (iv) ACCEPTANCE -

This is the Commissioner's acceptance of a patent application. Once the Commissioner has accepted a patent application, certain details of the application are published in the AOJP. Notice of opposition may be filed within three months of advertisement of acceptance.

### (v) OPPOSITION -

If an opposition action is commenced against the grant of the patent, the six-figure acceptance number and the name of the opponent are published. If the opposition is to the Certification of an Innovation Patent, the patent number and the name of the opponent are published.

### (vi) SEALING -

Most accepted applications are not opposed. These proceed to sealing and become granted patents. Of the few that are opposed (less than 1%) most of these, after resolution of the opposition, proceed to sealing and become granted patents. Sealed patents are simply listed in order of their application number.

### (vii) CERTIFICATION-

This is the Commissioner's Certification after passing examination of a previously granted unexamined Innovation Patent.

In addition to the actions related to these stages, other actions reported include: assignments, lapsing or withdrawal of applications and ceasing or expiry of patents, voluntary amendments, extensions of time for certain actions and registration of licences.

## How To Identify Information Using "INID" Numbers

Patents are published in many different countries and in many different languages. As a result, finding the information that you want (eg the filing date) on a patent document or in a journal can be quite difficult. There is an international system operating, however, which codifies this information in an unambiguous way, by assigning a specific number to each piece of information about the history of a patent. These numbers are called the **I**nternationally **A**greed **N**umbers for the **I**dentification of **D**ata or INID numbers.

These numbers appear on all published patents and abstracts and are used throughout this journal to identify particular items of information. For example, the date on which a document is filed has the INID number (22), while the name of the applicant has the INID number of (71). These numbers are always expressed in parentheses and always immediately precede the information to which they relate. For example:

(22) 12.10.91

means that the filing date of the document which contains this reference is 12 October 1991. Learning the INID numbers for the information you want will help you find it quickly and easily.

A complete list of the INID numbers and the items to which they relate is provided at the end of this Guide.

## How Australian Patent Documents are Numbered

**Patent applications** in Australia are assigned a number at the filing stage in their processing. Each Australian application will retain the same number throughout its life, though different numbers may be associated to the application. The number will incorporate the year of lodgment then a unique number within the appropriate range.

There will be number ranges for types of patents:

100,000 – 199,999	Innovation
200,000 – 799,999	Standard
800,000 – 899,999	Petty
900,000 – 999,999	Provisional

When searching for information and ordering documents it is vital that you understand the numbering systems.

1. **Provisional Applications** are given a ten-figure number

e.g. 2002901123

A provisional application number is identified by the INID number (21).

2. **Complete and Innovation Applications** are also given a ten-figure application number

e.g. 2002200345 Standard  
2002100123 Innovation

There are prefixes applied to this number which indicate whether the application has been accepted:

A document corresponding to an unaccepted application has the prefix, AU-A; eg AU-A-2002200234.  
A document corresponding to an accepted application carries the prefix AU-B; eg AU-B-2002200234.

Users need to be aware that an accepted document may differ from the corresponding unaccepted document. This is because amendment may occur between first publication (OPI) and second publication (acceptance).

A ten-figure application number is identified by the INID number (21).

**NOTE:** When ordering any patent document from us, whether accepted or not, please quote the ten-figure application number preceded by the appropriate prefix.

## Arrangement of Information in the Journal

For each of the categories

- (i) Provisional Applications Filed,
- (ii) Complete Applications Filed,
- (iii) Applications Open to Public Inspection
- (iv) Applications Entered National Phase
- (v) Applications Accepted, and
- (vi) Innovation Patent Certified.

The Journal lists the information published in that category in an alphabetical Name Index list based on the name of the applicant. These indices are useful if you wish to find information about applications made by a particular applicant.

In addition to the Name Index there is provided, for each of these categories, a Numerical Index. This index lists the applications either in order of their five-figure Application Numbers, in the case of complete applications filed and applications OPI, or in order of their six-figure Document Number in the case of accepted applications. It provides, for each number, the name of the applicant. These indices are useful if you wish to track the progress of a particular patent application.

There are also IPC Indices provided for applications which are OPI, for applications which have entered national phase and for applications which have been accepted. IPC stands for International Patent Classification. Each IPC "mark" is an alpha-numerical representation of a particular area of technology. These indices are in order of IPC mark, and within each mark provide either the five-figure application numbers of the application which are now OPI or the six-figure numbers of the cases now accepted. These indices are useful if you wish to check on patent activity in a particular technology.

## Using the Indices

### 1. To Find Patent Information if You Know the Name of the Applicant.

Use the Name Indices. They will give you the following information identified by their INID number:

You will notice at each stage of following application through that all applications are in alphabetical order of **Applicant**, not inventor.

## 2. To Find Information About a Patent Application if You Know its Number.

Use the appropriate numerical index. This will give you the name of the applicant from the number. You will then need to use the appropriate Name Index as above to find out other information about the Patent Application you are interested in.

The following Numerical Indices are available:

- A) **Provisional** Applications filed.
- B) **Complete** Applications filed.
- C) **Innovation** Applications filed.
- D) Applications **Open to Public Inspection**.
- E) Applications **Entered National Phase**
- F) Applications **Accepted**.
- G) Innovation Patent **Certified**

## 3. To Find Information About Patent Documents in the Area of Technology in which You are Interested if You Know the International Patent Classification Mark for that Area.

All patent applications are classified according to their subject matter using the International Patent Classification (IPC). Although the system is very detailed and covers all technologies, knowledge of the IPC marks of the technologies you are interested in will allow you to find patent documents in these technologies quite easily. To identify the IPC marks of technologies you are interested in, you can inspect relevant documentation in any of IP Australia's state offices.

The indices to use are

- A) Applications **OPI** - IPC Index
- B) Applications **accepted** - IPC Index
- C) Applications **Entered National Phase** – IPC Index

These indices give you the numbers of the applications which are either OPI, Entered National Phase or Accepted and are listed in order of their IPC marks.

Once you have the numbers of the documents that interest you, consult the relevant Number Index (see 2. above) to find the applicant's name, and then the Name Index (see 1. above) to find out the details of that application.

## 'INID' NUMBERS in use on Australian Patent Documents

'INID' is an acronym for 'Internationally agreed **N**umbers for the **I**dentification of **D**ata'.

### (10) Document identification

- (11) Number of the document
- (12) Plain language designation of the kind of document
- (19) WIPO country code, or other identification, of the country publishing the document.

### (20) Document filing data

- (21) Number(s) assigned to the application(s).
- (22) Date(s) of filing application(s)
- (23) Other date(s) of filing, including exhibition filing date and date of filing complete specification following provisional specification.
- (24) Date from which industrial property rights may have effect.

### (30) Priority data

- (31) Number(s) assigned to priority application(s)
- (32) Date(s) of filing priority application(s)
- (33) Country (countries) in which the priority application(s) was (were) filed.

### (40) Date(s) of making available to the public

- (43) Date of publication by printing or similar process of an unexamined document, on which no grant has taken place on or before the said date.
- (44) Date of publication by printing or similar process of an examined document, on which no grant has taken place on or before the said date.
- (45) Date of publication by printing or similar process of a document, on which grant or certification has taken place on or before the said date.

### (50) Technical Information

- (51) International Patent Classification
- (52) Domestic or national classification
- (54) Title of invention
- (56) List of prior art documents, if separate from descriptive text
- (57) Abstract or claim

### (60) Reference(s) to other legally related domestic document(s)

- (60) Related by cognate(s).
- (61) Related by addition(s).
- (62) Related by division(s).

### (70) Identification of parties concerned with the document

- (71) Name(s) of applicant(s)
- (72) Name(s) of inventor(s) if known to be such
- (74) Name(s) of attorney(s) or agent(s)
- (75) Name(s) of inventor(s) who is (are) also applicant(s)

### (80) Identification of data related to International Conventions other than the Paris Convention

- (86) PCT Application Number
- (87) PCT Publication Number

### NOTE

- (1) Australian patent documents published on or after 26 October 1978 should be referred to by the application number preceded by the prefix AU-A or AU-B.  
  
    **AU-A** = Pre-examination                      **AU-B** = Post-examination
- (2) The classification used is the International Patent Classification and is identified by the INID code (51). Further editions of the classification are identified as (51)<sup>2</sup>, (51)<sup>3</sup>, (51)<sup>4</sup> and (51)<sup>5</sup>.
- (3) INID code 74 provides for the name of the patent attorney, or firm of attorneys, prosecuting an application.

**Official Notice****PCT Rule Changes and Exchange of Patent Documents**

On 12 December 2008, the Federal Executive Council made the Intellectual Property Laws Amendment Regulations 2008 (No.1) (the IP Regulations). The IP Regulations have been registered in the Federal Register of Legislative Instruments and copies are available from the ComLaw website ([www.comlaw.gov.au](http://www.comlaw.gov.au)).

Amongst other matters, the IP Regulations amend the Patents Regulations 1991 and update the English text of the Regulations under the Patent Cooperation Treaty (PCT Rules) to reflect the changes which were agreed to at the PCT Union meetings of October 2007 and September 2008. The aim of a majority of the remaining changes is to simplify the application/examination processes for Convention applications by making better use of opportunities to electronically exchange patent documents. There will also be more alignment of the Convention application processes with similar processes already in place for PCT national phase applications. The changes should result in significant savings for applicants seeking patent protection overseas as well as in Australia.

In detail the IP Regulations amend the Patents Regulations by:

- Updating the English text of the PCT Rules set out in Schedule 2A to include the changes to the PCT Rules due to take effect on 1 January 2009. These changes relate to Supplementary International Searches and languages of International Publication.
- Amending and simplifying regulations 1.6, 3.2 and 8.6 to replace the requirement for the mandatory filing of various documents associated with a Convention application with one of filing only if required by the Commissioner in writing (with consequential changes to regulations 9A.4 and 13.4). The amendments mirror the arrangements currently in place for applications made under the auspices of the PCT where copies of certain patent documents are not routinely required. The amendments also standardise the various prescribed time periods that apply following the Commissioner issuing a request to the applicant to file copies of various patent documents. The prescribed time period is now standardised at three months from the date on which the Commissioner requests the document.
- Amending regulations 3.18 and 3.20 to change the practice for modified examinations - applicants will only be required to file certified copies of granted patents when requested to do so by the Commissioner.
- Amending regulations 3.20 and 8.6 to better reflect the administrative practices followed by foreign patent offices when certifying documents or allocating application numbers.
- Providing the legislative basis to allow the Commissioner of Patents to electronically exchange priority documents with the International Bureau – and potentially with foreign patent offices – when a document exchange service is established for this purpose (new regulation 3.22). However, the Commissioner can only disclose a document to the International Bureau or a foreign patent office at the request of the applicant or otherwise with the consent of the applicant.
- Making some minor corrections to the Patents Regulations following the introduction of the new patent attorney discipline regime in June 2008.
- Updating Schedule 4 to include Cape Verde as a Convention country and to correct the spelling of ‘Bosnia and Herzegovina’.

The amendments to the Patents Regulations will commence on 1 January 2009.

Note – The Australian Patent Office will not be offering a Supplementary International Searching Authority service under the updated PCT Rules. However, Australian PCT applicants will be able to pay the requisite fees and request a supplementary international search be carried out on their PCT application by another International Searching Authority (ISA) that offers this service. As of 1 January 2009, this service will be offered by the Nordic Patent Institute and ISAs in Sweden and Russia. It is expected that additional ISAs will offer this service later in the 2009–2010 time period.

## ABSTRACTS OF DECISIONS

## DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS

<b>Application</b>	:	No. 680635 in the name of G.D.Searle LLC
<b>Title</b>	:	Hydroxyethylamino sulfonamides useful as retroviral protease inhibitors
<b>Action</b>	:	Request for an extension of term under section 70
<b>Decision</b>	:	Issued 05 December 2008

**Abstract**

The patentee applied for an extension of term based on the substance darunavir. Another substance (known as amprenavir) within the scope of the claims had an earlier inclusion in the Australian Register of Therapeutic Goods (ARTG).

An application for extension of term must be made within six months of “the date of commencement of the first inclusion in the Australian Register of Therapeutic Goods of goods that contain, or consist or, any of the pharmaceutical substances referred to in subsection 70(3)”. This provision was found to mean that an application for extension of term is to be made within six months of the *earliest* first inclusion in the ARTG.

The patentee is not obligated to search the ARTG for all possible pharmaceutical substances covered by their patent, and all possible first regulatory approvals. Patentees can rely on the regulatory approvals that they are aware of. However, once they become aware that there is an earlier first regulatory approval, they have no option but to amend their application, and if necessary make a request under section 223.

Equally, the Commissioner is not required to carry out a search, and will record the extension on the basis of the information provided to her. However, the Commissioner is not prevented from undertaking her own investigation, and if she becomes aware of an earlier inclusion she has no option but to bring that to the patentee’s attention so that the application for extension of term is correctly made.

Since the application was not made within six months of the date of the earliest first inclusion in the ARTG, the application is refused.

It was noted that regulation 10.7(7) operates when the full facts were not known to the patentee at the time of granting the extension of term.

## Proceedings under the Patents Act 1990

### Extensions of Time, Section 223

#### Applications Received

Notice of opposition under Section 223(6) to the undermentioned application(s) for an extension of time may be lodged at the Patent Office within the prescribed time.
